Nov 2022

> EIP-1155:
> "A standard interface for contracts that manage multiple token types. A single deployed contract may include any combination of fungible tokens, non-fungible tokens or other configurations (e.g. semi-fungible tokens)."

a contract deployed based on eip-1155 allows us to manage multiple token types -- (a) fungible token(s) "without a decimal" along with (a) non-fungible token(s) -- **within one contract.**

9 / 15
Nov 2022

i created a "simple" ERC1155-based nft collection deployed at goerli as an illustration:

Ethereum (ETH) Blockchain Explorer

Simple1155 | Address 0x3ae337C693a9a0888998e475076e4eB964cc5b81 | Etherscan 11

The Contract Address 0x3ae337C693a9a0888998e475076e4eB964cc5b81 page allows users to view the source code, transactions, balances, and analytics for the contract address. Users can also interact and make transactions to the contract directly on...

Nov 2022

on the second txn i called `mintBatch` method on the contract:

Ethereum (ETH) Blockchain Explorer

Goerli Transaction Hash (Txhash) Details | Etherscan 4

Goerli (GTH) detailed transaction info for txhash

sourcify.dev

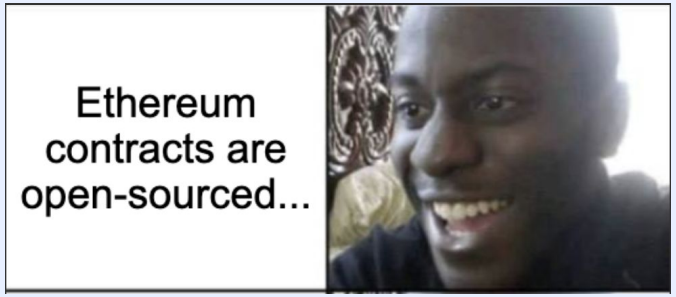
Ethereum has good verification culture

Ethereum has good verification culture

- Community demands contracts to be verified



Ethereum has good verification culture

- Community demands contracts to be verified

sourcify.dev

Problems

- **Open-source**
  - Largest verifier is close-source. Verification process is a **black box**.
- **Closed data**
  - EVM data is onchain and public, anyone can build a block explorer
  - Verified contracts are **offchain and siloed**, you depend on whose database it's on.
- **Centralized**
  - If it's gone it's gone
  - 🚫 http://goerli.etherscan.io/address/0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D
  - 🚫 https://rinkeby.etherscan.io/address/0x74FbCcEB9a11821cF7098494d887881C2f0e479a
- **Stagnated tooling and suboptimal devX**
  - Verification is still painful, API keys
  - Lacking rich compilation data
    - sourceMaps, bytecodes, storageLayout, immutables, full std-JSON input/output.

Problems

- Not a “sexy” thing to build
- Misaligned incentives
  - Requires intentional intervention
  - “Someone has to do it”
